Lenexa, Kansas 66219

Subject: **CERCLA Assessment July 2020 Trip Report**  
**Downtown Wells Site and Former Electrolux Site, Jefferson, Iowa**  
**U.S. EPA Region 7 START 5, Contract No. 68HE0719D0001**  
**Task Order No. 19F0086.003**  
**Task Monitor: Brian Mitchell, EPA Project Manager**

Dear Mr. Mitchell:

Tetra Tech, Inc. submits the attached Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Assessment July 2020 Trip Report regarding sampling activities at the Downtown Wells Site and Former Electrolux Site in Jefferson, Iowa. If you have any questions or comments, please contact the START Project Manager at (816) 412-1770.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Ryan Slanczka'.

Ryan Slanczka  
START Project Manager

A handwritten signature in blue ink, appearing to read 'Ted Faile'.

Ted Faile, PG, CHMM  
START Program Manager

## 1.0 INTRODUCTION

The U.S. Environmental Protection Agency (EPA) Region 7 Superfund Division tasked Tetra Tech, Inc. (Tetra Tech) Superfund Technical Assessment and Response Team (START), under contract number 68HE0719D0001, Task Order 19F0086.003, to conduct Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) Assessment activities, including a Preliminary Assessment (PA) of the Downtown Wells Site and a Site Investigation (SI) of the Former Electrolux Site, in Jefferson, Iowa (see Figure 1, Appendix A). The volatile organic compound (VOC) *cis*-1,2-dichloroethene (DCE) has been identified in three of four municipal water supply wells in the downtown area. This VOC is a common degradation product of the common industrial solvent trichloroethene (TCE) and the dry cleaning solvent tetrachloroethene (PCE).

As directed by the Sub-Task Modification under contract number 68HE0719D0001, Task Order 19F0086.003, the Tetra Tech team developed a Quality Assurance Project Plan (QAPP) for PA and SI activities (Tetra Tech 2020). This trip report summarizes implementation of the QAPP, and conveys site background information, field sampling techniques, and analytical results from the EPA Region 7 laboratory. Submittals of the PA and SI reports will occur after completion of additional CERCLA Assessment activities.

The purpose of the CERCLA Assessment was to determine presence or absence of contaminants at the sites. Analytical data from the CERCLA Assessment will be used to determine whether further evaluation at each site would be warranted.

Primary components of PA and SI tasks were as follows:

- Obtain continuous soil cores from two direct-push technology (DPT) borings at the Former Electrolux Site and one DPT boring at the Downtown Wells Site, collocated with DPT temporary monitoring wells. The purpose of the soil cores is to document lithological observations and evaluate potential water bearing zones for DPT temporary wells.
- Collect two groundwater samples from each of eight DPT temporary monitoring wells installed within city rights-of-way in downtown Jefferson. Wells will be located next to five historical dry cleaning facilities identified through review of database listings compiled in an Area Corridor Report provided by Environmental Data Resources, Inc. (EDR).
- Collect two groundwater samples from each of seven DPT temporary monitoring wells installed on private property adjacent to the Former Electrolux Plant.
- Determine and document Global Positional System (GPS) coordinates at all sample locations.
- Submit groundwater samples to the EPA Region 7 laboratory for VOC analysis.

During July 6 through 8, 2020, START Project Manager (PM) Ryan Slanczka, assisted by START Members (SM) geologists Lauren Murphy, Kaylee Thomas, and Lauren Robertson, conducted CERCLA Assessment activities. Iowa Department of Natural Resources (IDNR) Environmental Specialist Matthew Graesch was on site during this investigation. Brian Mitchell was the EPA PM and Task Monitor.

## **2.0 DESCRIPTIONS AND BACKGROUNDS OF THE SITES**

Section 2.0 specifies locations of the Downtown Wells Site and Former Electrolux Site, describes the sites, and recounts operational and investigative histories related to the sites.

### **2.1 LOCATIONS/DESCRIPTIONS OF THE SITES**

The Downtown Wells Site is at the intersection of Elm Street and Monroe Street in Jefferson, Greene County, Iowa, with the 10-year capture zone of the downtown Jefferson municipal drinking water wells forming the informal boundary of this site (see Figure 1, Appendix A). The Downtown Wells Site includes four Jefferson municipal drinking water wells screened at total depths of approximately 150 feet below ground surface (bgs) in the Pleistocene Sand and Gravel Unit. Drillers' logs for these water wells indicate that the sand and gravel aquifer is typically encountered within about 100 to 150 feet bgs, and is overlain by glacial till. This aquifer is localized to a buried alluvial channel and overlies Pennsylvanian Cherokee Group bedrock consisting of interbedded shale, coal, and limestone (IDNR 2013).

The Former Electrolux Site is the former Electrolux property at 601 East Central Street in Jefferson, Greene County, Iowa. This site is within the southeast quarter of Section 5, Township 83 North, Range 30 West (see Figure 1, Appendix A). The former manufacturing facility occupied approximately 7.5 acres at the northwest part of the 20.75-acre Electrolux parcel. The facility buildings have been demolished, leaving concrete pads surrounded by a gated fence. WCI Laundry Division (Electrolux) owns the parcel, which is zoned for industrial use (Greene County, Iowa Assessor's Office 2016).

### **2.2 OPERATIONAL AND INVESTIGATIVE HISTORIES OF THE SITES**

The approximately 21-acre Former Electrolux Site previously included a 75,500-square-foot facility that manufactured dishwasher motor transmissions from 1960 until it was decommissioned in March 2011. The former manufacturing building was demolished, and the facility now includes a 7.5-acre area of concrete building slabs, parking lots, fencing, and sidewalks where manufacturing activities previously occurred. In 2010, Electrolux began to evaluate potential subsurface contamination derived from manufacturing activities. A phased site assessment approach was followed from 2010 through 2013 to assess facility subsurface conditions downgradient of and in areas exterior to the former manufacturing facility. Additional groundwater monitoring occurred in 2014, and Golder Associates, Inc. (Golder) completed a Site Assessment and Summary Report that included a conceptual site model in October 2016 (Golder 2016).

Results from the site assessments indicate that soil and groundwater in the former manufacturing area are contaminated with chlorinated VOCs (CVOC), primarily TCE and its breakdown products.

Contamination was identified within 0 to 40 feet bgs, within the upper glacial tills. CVOC-impacted soils were found only within the footprint of the former facility and adjacent landscaped areas within 1 to 7 feet bgs. Highest concentrations of CVOC contaminants in groundwater were detected in the yellow brown till within approximately 30 to 40 feet bgs near the southeast portion of the former facility.

The October 2016 Site Assessment report concluded that natural attenuation and chlorinated degradation were occurring in the former manufacturing area, and that extents of contamination were within the Electrolux property boundary. Sources of VOC contamination at the former manufacturing area are believed to be former manufacturing operations within the eastern portion of the facility (Golder 2016).

Groundwater in the following Jefferson municipal drinking water wells was found to contain DCE:

Well 4 (~150 feet total depth, 30 feet of screen from 120 to 150 feet bgs), Well 6 (160 feet total depth, 15 feet of screen from ~142 to 157 feet bgs), and Well 9 (159 feet total depth, screen depth unknown).

Documents obtained from the Jefferson Water Department Source Water Protection Plan indicate that the southwest portion of the former Electrolux plant is within the 10-year capture zone of four of the Jefferson municipal drinking water wells (Tetra Tech 2016).

An investigation by Toeroek Associates Inc. (Toeroek) completed in April 2017 included collection of groundwater samples by use of a DPT drilling rig. Four groundwater samples were collected off site at 30- and 50-foot depths at two temporary wells downgradient (south) of the approximate manufacturing area. The DPT was unable to reach the two planned lower target collection depths of 120 and 150 feet bgs, encountering clay refusal at approximately 77 feet bgs. No VOC was detected in any sample collected during the sampling event (Toeroek 2017).

An additional investigation completed in May 2018 included installation of two permanent monitoring wells downgradient of the former facility. The monitoring wells were installed to depths of 98 feet bgs (MW-1) and 133 feet bgs (MW-2) by use of sonic rotary technology. The wells were screened from 88 to 98 feet bgs (MW-1) and 123 to 133 feet bgs (MW-2), and groundwater samples were collected by use of low-flow QED Micropurge equipment. Facility-related VOCs were not detected in any sample collected during the sampling event; however, minor amounts of chloroform were detected at concentrations below its maximum contaminant level (MCL) (Toeroek 2018).

In 2019, the Electrolux Site was referred to the EPA Region 7 Superfund Division for further assessment, and was divided into the Downtown Wells Site and the Former Electrolux Site. Under Task Order 19F0086.003, Tetra Tech START conducted initial CERCLA Assessment activities, including a PA of the Downtown Wells Site and an SI of the Former Electrolux Site during November 11 through 13, 2019. Primary components of the PA task were to complete a review of the Downtown Wells Site to determine the top six sites likely to have contributed to the contamination found in downtown Jefferson municipal drinking water wells, and to install temporary monitoring wells near each of those six sites for collection of groundwater samples to undergo full VOC analysis. Groundwater was encountered at two of the six temporary monitoring wells. No facility-related contamination was found in samples collected from the Downtown Wells Site during the initial PA activities. Primary components of the SI task were to install a permanent monitoring well approximately 400 feet west of the former Electrolux facility, and to collect groundwater samples from the well for VOC analysis. START rotary sonic subcontractor Cascade Drilling, L.P. advanced a borehole to 115 feet bgs for the proposed installation of permanent monitoring well MW-3 in the Pleistocene Sand and Gravel Unit used as the drinking water aquifer for Jefferson. However, this unit was not encountered, and the borehole was terminated at 115 feet bgs in Pennsylvanian shale bedrock. Because of failure to encounter either this aquifer or any other stratum capable of producing a quantity of groundwater adequate for sampling purposes, START discontinued well installation activities, and the borehole was abandoned.

### **3.0 CERCLA ASSESSMENT**

During July 6 through 8, 2020, START conducted additional CERCLA Assessment activities as part of an SI of the Former Electrolux Site and a PA of the Downtown Wells Site. The purpose of the CERCLA Assessment was to determine presence or absence of contaminants at the sites. On July 7, 2020, the City of Jefferson provided the approved Building Permit (see Appendix F) pertaining to DPT locations within the downtown area. Mr. Slanczka and SM geologists Lauren Murphy, Kaylee Thomas, and Lauren Robertson mobilized to Jefferson on July 6, 2020, and subsequently were joined on site by IDNR Environmental Specialist Matthew Graesch during July 6 through 7, 2020. Drilling services were provided by Below Ground Surface, Inc., (BGS) of Lawrence, Kansas.

The following sections describe CERCLA Assessment activities. A site-specific field logbook is in Appendix B, and photographic documentation is in Appendix C.

#### **3.1 FORMER ELECTROLUX SITE INVESTIGATION**

To document lithological observations and evaluate potential water bearing zones for DPT temporary wells, continuous soil cores were collected and logged (Appendix D) from two (DPT) borings collocated with DPT temporary monitoring wells GW-09 and GW-12 (see Figure 2, Appendix A).

START was to collect two groundwater samples from each of seven DPT temporary monitoring wells installed on private property adjacent to the Former Electrolux Plant. On July 6 and 7, 2020, two groundwater samples were collected from GW-07. Due to lithologic restrictions, and based on consultation with EPA and IDNR, only one groundwater sample each was collected from GW-08, -09, -10, -11, -12, and -13 on July 6 and 7, 2020. All samples were submitted for VOC analysis to the EPA Region 7 laboratory in Kansas City, Kansas.

#### **3.2 DOWNTOWN WELLS SITE PRELIMINARY ASSESSMENT**

START selected locations of temporary monitoring wells to be sampled within the Downtown Wells Site based on a December 2019 Tetra Tech historical review of the community and local industry/commercial businesses. Intent of that review was to identify sites most likely to have contributed to the contamination found in the Jefferson municipal drinking water wells 4, 6, and 9. Five historical dry cleaning facilities were so identified through listings in an Area Corridor Report provided by EDR (EDR 2019). Locations of temporary monitoring wells for groundwater sampling subsequently were selected based on hydraulic positions of those facilities relative to Jefferson municipal drinking water wells 4, 6, and 9 (see Appendix A, Figure 3).

The selected dry cleaning facilities likely to have contributed to the contamination found in Jefferson municipal drinking water wells 4, 6, and 9 were as follows:

- **Rohovit Cleaners and Elite Cleaners and Furriers:** The EDR Area Corridor Report lists Rohovit Cleaners at 108 South Wilson Avenue, and Elite Cleaners and Furriers at 112 South Wilson. Temporary monitoring well GW-14 was advanced approximately 60 feet south-southwest of Rohovit Cleaners and approximately 50 feet west of Elite Cleaners and Furriers. Temporary monitoring well GW-15 was advanced 40 feet south of Rohovit Cleaners and approximately 5 feet south of Elite Cleaners and Furriers.
- **White Cleaners:** The EDR Area Corridor Report lists White Cleaners at 215 South Wilson Avenue. Temporary monitoring well GW-16 was advanced in the alleyway approximately 10 feet north of the building. Temporary monitoring well GW-17 was advanced approximately 12 feet east of the former dry cleaner facility.
- **Jefferson Dry Cleaners:** The EDR Area Corridor Report lists Jefferson Dry Cleaners at 116 North Wilson Avenue. Temporary monitoring well GW-18 was advanced approximately 50 feet southwest of the former dry cleaner facility. Temporary monitoring well GW-19 was advanced approximately 50 feet southeast of the former dry cleaner facility.
- **Rohovit Cleaners & Laundromat:** The EDR Area Corridor Report lists Rohovit Cleaners & Laundromat at 204 West Washington Street. Temporary monitoring well GW-20 was advanced approximately 25 feet southwest of the former dry cleaner facility. Temporary monitoring well GW-21 was advanced approximately 45 feet southeast of the former dry cleaner facility.

To document lithological observations and evaluate potential water bearing zones for DPT temporary wells, one continuous soil core was collected and logged (Appendix D) at temporary monitoring well GW-14 (see Figure 3, Appendix A).

START was to collect two groundwater samples from each of eight DPT monitoring wells within city rights-of-way next to each of the five facility locations. Due to lithologic restrictions and in coordination with the EPA OSC, only one groundwater sample each was collected from GW-14, -15, -16, -17, -18, -19, and -21 at the Downtown Wells Site. Groundwater was not encountered at GW-20. All samples were submitted for VOC analysis to the EPA Region 7 laboratory in Kansas City, Kansas.

### **3.3 GROUNDWATER SAMPLING AT TEMPORARY MONITORING WELLS**

Groundwater sampling at DPT-advanced temporary monitoring wells proceeded by use of a Geoprobe® Screen Point 16 groundwater sampler. Groundwater was collected through disposable polyethylene tubing fitted with a check valve (i.e., inertial pump method). Samples were collected at greatest depth, with subsequent raising of the sampler to the upper depth interval. Prior to collection of a sample at a given depth, approximately three tubing volumes (or 1 gallon of water) was purged by use of a bottom check valve. Samples were collected directly into laboratory-provided sample containers. Pertinent data, including sample locations and analyses to be performed, were recorded on electronic field sheets (see Appendix E).

The groundwater sampler and rods were decontaminated following sampling at each location, and new disposable polyethylene tubing was used at each location. After completion of sampling, each DPT borehole was plugged with Cetco 3/8" bentonite pellets, and a Portland cement and bentonite grout mixture was applied to make the borehole flush with the surrounding paved surfaces.

Each of the 15 groundwater samples (eight from the Former Electrolux Site and seven from the Downtown Wells Site) was collected for analysis for VOCs into three 40-milliliter (mL) volatile organic analysis (VOA) vials preserved with hydrochloric acid (HCl). The sample vials were labelled and packaged accordingly, and then placed in a cooler maintained at or below a temperature of 4 degrees Celsius (°C) until submitted for analysis to the EPA Region 7 laboratory on July 9, 2020, under Analytical Services Request 8596. Table 1 summarizes sample locations, identification numbers, depths, and laboratory analyses.

### **3.4 QUALITY ASSURANCE/QUALITY CONTROL SAMPLING**

Field quality control (QC) sampling included a laboratory-supplied aqueous trip blank sample. Analytical data from the trip blank sample were referenced to determine whether contamination had been introduced during transportation of the containers and samples. Additional QC sampling involved collections of a field blank sample and equipment rinsate blank sample. The field blank sample was analyzed to assess field-introduced and laboratory-introduced contamination. The rinsate blank sample was analyzed to determine adequacy of decontamination procedures. Two field duplicate samples were also submitted to determine total method precision. Table 1 above summarizes QC samples collected.

### **3.5 DECONTAMINATION**

BGS decontaminated direct-push sampling equipment prior to first use and after sampling at each location. Decontamination consisted of thoroughly scrubbing the equipment with a non-phosphate detergent solution and rinsing the equipment with deionized water. Decontamination of additional sampling equipment was not necessary because all other sampling equipment was disposable.

### **3.6 INVESTIGATION-DERIVED WASTE**

Investigation-derived waste (IDW) consisted of expendable sampling supplies and personal protective equipment (PPE). Disposal of expendable sampling materials and PPE occurred as municipal solid waste.

## **4.0 ANALYTICAL DATA SUMMARY**

During field activities from July 6 through 8, 2020, START collected groundwater samples to determine presence or absence of contaminant concentrations at the EPA Region 7 laboratory's achievable reporting/detection concentration limits. On July 9, 2020, samples were submitted for analysis to the EPA Region 7 laboratory in Kansas City, Kansas. The following sections summarize analytical results from the SI and PA. The analytical data package, including field sheets and chain-of-custody records, is in Appendix E.

### **4.1 GROUNDWATER SAMPLES**

START collected 15 groundwater samples from temporary monitoring wells installed at 14 DPT boring locations: GW-07, -08, -09, -10, -11, -12, -13, -14, -15, -16, -17, -18, -19, and -21 (see Appendix A, Figures 2 and 3). Groundwater sampling was attempted at boring location GW-20; however, groundwater was not encountered. Samples were analyzed for VOCs only.

The common laboratory contaminant acetone was detected in most samples. Detected in the sample collected from GW-21, near the former Rohovit Cleaners, were fuel-related VOCs cyclohexane, ethylbenzene, methylcyclohexane, and m- and/or p-xylenes. Each detected analyte concentration was below that analyte's EPA MCL (or Regional Screening Level [RSL] if an MCL had not been established).

*Cis*-1,2-DCE also was detected in the groundwater sample collected from GW-21 at concentration of 29 micrograms per liter ( $\mu\text{g/L}$ ), below the MCL of 70  $\mu\text{g/L}$ . Presence of petroleum hydrocarbons, as evidenced in sample GW-21, can enhance degradation of both PCE and TCE to the *cis*- and *trans*- isomers of 1,2-DCE, and to 1,1-DCE.

No other VOC was detected in groundwater samples. Table 2 summarizes analytical results from the groundwater samples.

## **4.2 QUALITY ASSURANCE/QUALITY CONTROL SAMPLES**

QC samples collected during the CERCLA Assessment included one aqueous trip blank sample, one field duplicate sample, one field blank sample, and one equipment rinsate blank sample.

The VOC analyte acetone was detected at concentration well below the RSL for tap water (No MCL for acetone has been established) in both field duplicates and the rinsate blank. No other VOC was detected in any QC sample collected. Table 2 summarizes analytical results from the QC samples submitted to the EPA Region 7 laboratory.

TABLE 2

SUMMARY OF VOLATILE ORGANIC COMPOUNDS DETECTED IN SAMPLES  
FORMER ELECTROLUX AND DOWNTOWN WELLS SITES, JEFFERSON, IOWA

Analyte	Regional Screening Levels	Sample Identification

- UJ Analyte not detected at concentration at or above estimated reporting limit

## **5.0 DEVIATIONS FROM THE QAPP**

The following deviations from the EPA-approved QAPP occurred, and were communicated to EPA PM and Task Monitor Brian Mitchell:

- Two groundwater samples were collected from GW-07. However, only one groundwater sample each was collected from GW-08, -09, -10, -11, -12, and -13 at the Former Electrolux site.
- Only one groundwater sample each was collected from GW-14, -15, -16, -17, -18, -19, and -21 at the Downtown Wells site. Groundwater was not encountered at GW-20.

## 6.0 CONCLUSIONS

The EPA Region 7 Superfund Division tasked START, under contract number 68HE0719D0001, Task Order 19F0086.003, to conduct CERCLA Assessment activities, including a PA of the Downtown Wells Site and an SI of the Former Electrolux Site, in Jefferson, Iowa (see Figure 1, Appendix A). CERCLA Assessment activities occurred July 6 through 8, 2020. Primary components of the PA task were to conduct a review of the Downtown Wells Site to investigate five former dry cleaning facilities that may have contributed to the contamination found in downtown Jefferson municipal drinking water wells, and to install temporary monitoring wells near locations of each of those former facilities for collection of groundwater samples to undergo full VOC analysis. Primary components of the SI task were to collect two groundwater samples from each of seven DPT temporary monitoring wells installed on private property adjacent to the Former Electrolux site for VOC analysis. To document lithology and evaluate potential water bearing zones for DPT temporary wells, soil cores were collected from two DPT borings near the Former Electrolux site and one DPT boring at the Downtown Wells site collocated with temporary monitoring wells.

Over the course of the PA, START collected 15 groundwater samples at temporary monitoring well locations GW-08 through -19 and at GW-21 for analysis for VOCs. Each of VOC analytes acetone, cyclohexane, ethylbenzene, methylcyclohexane, and m- and/or p-xylene was detected at concentration below its EPA MCL (or its RSL if an MCL had not been established). These analytes are either common laboratory contaminants or are commonly associated with fuel releases.

*Cis*-1,2-DCE was detected in the groundwater sample collected from GW-21 at 29 µg/L, below the MCL of 70 µg/L. No other chlorinated VOC was detected.

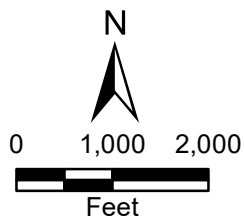

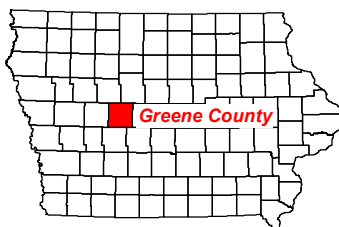

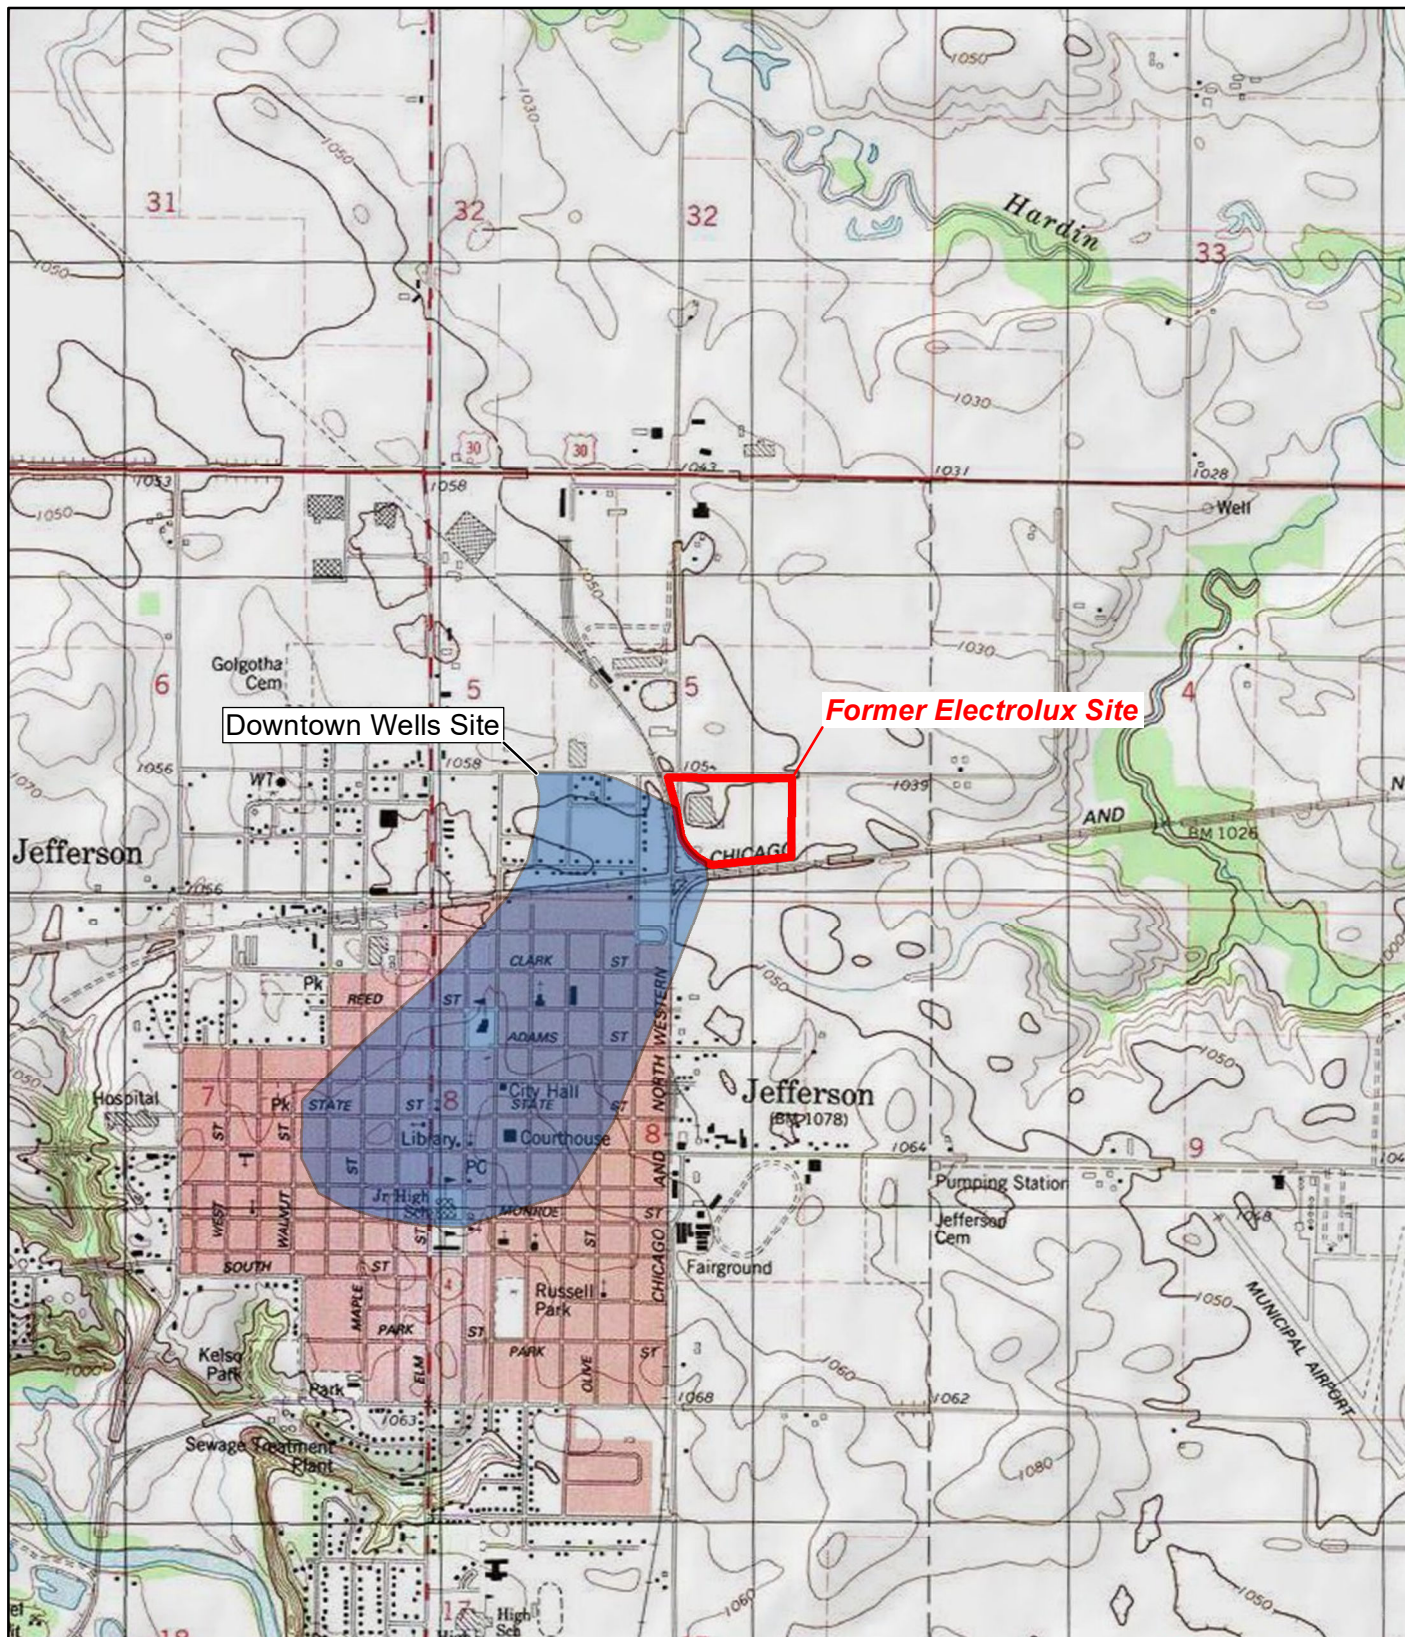

The groundwater sample containing *cis*-1,2-DCE (GW-21) was collected in front of a historical dry cleaner and adjacent to two filling stations. *Cis*-1,2-DCE is a degradation product of TCE. Presence of petroleum hydrocarbons, as evidenced in sample GW-21, can enhance degradation of both PCE and TCE to the *cis*- and *trans*- isomers of 1,2-DCE, and to 1,1-DCE. Therefore, the likely source of the *cis*-1,2-DCE detected in GW-21 may be a result of historical dry cleaning activity at 204 West Washington Street. START recommends further investigation of the historical dry cleaning activity at 204 West Washington Street to identify the source of contamination prior to completion of the requested PA and SI reports.

**APPENDIX B**  
**FIELD LOGBOOK**

7/5/2020

- ~1900 - Departed Tetra Tech for Jefferson, IA.
- ~2300 - Arrived at hotel in Jefferson, IA.

7/6/2020

- 0730 - Tt met with DPT subcontractor BGS, Tetra Tech geologist Lauren Murphy, Seagull geologists Kaylee Thomas and Lauren Robertson, and IDNR Geologist Matt Graesche.
- 0742 - Mobilized crew to Former Electrolox site
- 0935 - Began soil boring at GW-12
- 0952 - Met with Landus Coop Personnel Ethan Taube
- 1045 - Met w/ Landus Coop personnel Ethan T. and Jason Chase Hunter
- 1110 - Encountered groundwater at 42-44' Bgs
- 1115 - Advanced rods for GW sampling at GW-12 later in the day
- 1135 - Quantity of GW was immediately adequate for sampling, collected sample [GW-12] from 42-44' Bgs.

- 1150 - Break for lunch
- 1245 - Resume work; Met at GW-09.
- 1300 - Begin soil boring at GW-09.
- 1600 - Collected sample GW-09 from a screening interval of 35-39' bgs. ~~Could not collect~~ Groundwater was not encountered at any other depth, so no second sample was collected. Elevation was ~5' lower at GW-09 than at GW-12.
- 1636 - Began advancing geoprobe for GW at GW-11
- 1641 - Began advancing geoprobe for GW at <sup>GW-07</sup> GW-08
- 1723 - Collected sample GW-11 from 46-50'
- 1705 - Collected sample GW-07 from 35-39' bgs  
- Left rods at GW-07 to attempt collection of a shallow sample in the morning
- 1746 - Began advancing geoprobe for GW at GW-08
- 1810 - Collected sample GW-08 from 35-39' bgs
- 1830 - TT and BGS personnel leave site; End of work day

7-7-2020

- 0730 - Tetra Tech, BGS, and IDNR personnel met for morning meeting.
- 0745 - Collected sample GW-07 from 11-15' bgs.
- 0822 - Began advancing geoprobe at GW-14 for soil coring
- 0857 - Paid fee to city of Jefferson for Building Permit
- 1115 - Collected sample GW-10 from 46-50' bgs
- 1152 - Began advancing geoprobe at GW-13
- 1235 - Collected sample GW-13 from 46-50'
- 1123 - Began advancing geoprobe at GW-15
- 1154 - Collected samples GW-15 and GW-15-DOP from 41-45' bgs.
- 1315 - Began advancing geoprobe at GW-16
- 1350 - Encountered refusal at 42' bgs; collected sample GW-16 from 38-42' bgs
- 1425 - Began advancing geoprobe at GW-17
- 1545 - Collected sample GW-17 from 38-42' bgs
- 1554 - At GW-19, reached target depth of 45' bgs, checked every 4' interval up to 16' bgs, did not encounter groundwater, discontinued boring GW-19; began advancing geoprobe at GW-18

- 1619 - Collected Rinsete Blank Sample (8596-15)  
 1630 - Collected Sample GW-18 from 46-50' bgs  
 1600 - Seagull Personnel demobilize from site  
 1650 - Arrived at Electrolux site to advance rods to 15' bgs at GW-08 and GW-09  
 1712 - Rods completely advanced; End of workday

7/8/2020

- 0730 - Tetra Tech and BGS met at GW-08 and GW-09, ~~the~~ observed that groundwater had not accumulated overnight, retrieved rods.  
 0810 - Began advancing geoprobe at GW-19, in an attempt to get to a greater depth than previously, for groundwater  
 0900 - collected GW-19 from 47-51' bgs  
 0845 - Began advancing geoprobe at GW-21  
 0925 - collected GW-21 from 40-44' bgs  
 0945 - Began advancing geoprobe at GW-20;  
 \*BGS personnel noted strong petroleum odors, consistent at GW-21 and GW-14 at GW-21  
 1040 - After checking for groundwater at 2' interval from 45' to 36', Tt personnel discontinued sampling efforts at GW-20.  
 1049 - Collected sample Field Blank (8596-19)  
 1115 - Tetra Tech and BGS personnel demobilized from project site.  
 1530 - Arrived at Tt Kansas City office; End of work ~~on project~~ day

7/9/2020

1400 - Tetra Tech personnel Ryan Slawek  
began preparing samples for lab delivery

1548 - Samples delivered to EPA Region  
7 lab in Kansas City, KS.

1600 - End of Work

**EPA ANALYTICAL DATA**

**United States Environmental Protection Agency  
Region 7  
300 Minnesota Avenue  
Kansas City, KS 66101**

**Date:** 08/05/2020

**Subject:** Transmittal of Sample Analysis Results for ASR #: 8596

Project ID: BMFESDWS

Project Description: Downtown Wells site and Former Electrolux site

**From:** Margaret E.W. St. Germain, Chief  
Laboratory Technology & Analysis Branch  
Laboratory Services and Applied Sciences Division

**To:** Brian Mitchell  
LCRD/ROAG

Enclosed are the analytical data for the above-referenced Analytical Services Request (ASR) and Project. These results are based on samples as received at the Science and Technology Center. The Regional Laboratory has reviewed and verified the results in accordance with procedures described in our Quality Manual (QM). In addition to all of the analytical results, this transmittal contains pertinent information that may have influenced the reported results and documents any deviations from the established requirements of the QM.

Please ensure that you file this electronic (.pdf only) transmittal in your records management system. The Regional Laboratory will now retain all of the original hardcopy documentation (e.g. COC[s] and the R7LIMS field sheet[s], etc.) according to our LSASD records management system.

Please contact us within 14 days of receipt of this package if you determine there is a need for any changes. Please complete the Online ASR Sample/Data Disposition and Customer Survey for this ASR as soon as possible. The process of disposing of the samples for this ASR will be initiated 30 days from the date of this transmittal unless an alternate release date is specified on the Online ASR Sample/Data Disposition and Customer Survey. It is critical that we receive your response in accordance to RCRA and the laboratory accreditation.

If you have any questions or concerns relating to this data package, contact our customer service line at 913-551-5295.

CERCLIS ID: IAD047055140. GW sampling for preliminary assessment and site investigation.

EPA PM (BM)/TT sampler noted on the submitted ASR dated 6/3/2020 that this activity is not part of a litigation hold activity at this time.

GPRA/site code (+OU) ok per DB on 6/3/2020.

### Explanation of Codes, Units and Qualifiers used on this report

**Sample QC Codes:** QC Codes identify the type of sample for quality control purpose.

**Units:** Specific units in which results are reported.

\_\_\_ = Field Sample

ug/L = Micrograms per Liter

FB = Field Blank

FD = Field Duplicate

**Data Qualifiers:** Specific codes used in conjunction with data values to provide additional information on the quality of reported results, or used to explain the absence of a specific value.

(Blank)= Values have been reviewed and found acceptable for use.

UJ = The analyte was not detected at or above the reporting limit. The reporting limit is an estimate.

U = The analyte was not detected at or above the reporting limit.

J = The identification of the analyte is acceptable; the reported value is an estimate.

**1      VOCs in Water by GC/MS for Low Detection Limits****Lab:** Contract Lab Program (Out-Source)**Method:** CLP Statement of Work

**Samples:**    1-\_\_        2-\_\_        2-FD        4-\_\_        5-\_\_        6-\_\_        7-\_\_  
                 8-\_\_        9-\_\_        9-FD        11-\_\_       12-\_\_       13-\_\_       14-\_\_  
                 15-\_\_      16-\_\_      17-\_\_      18-\_\_      19-FB      20-FB

**Comments:**

Samples -5, -7 and -13 were analyzed 1 day past their 7-day holding time. A holding time of 7-days is applicable since these samples were not acidified to a pH of <2.0. All positive results were reported with a J-code indicating that they are estimated values. The actual concentration of some or all analytes may have been higher than the reported result. The results for analytes that were not found at or above the reporting limit were UJ-coded to indicate that the reporting limit is an estimated value.

Cis-1,2 Dichloroethene, trans-1,2-Dichloroethene and 1,1-Dichloroethene were UJ-coded in samples -2 and -2FD. Chlorobenzene, 1,2-Dichlorobenzene, 1,3-Dichlorobenzene, 1,4-Dichlorobenzene, 1,2,3-Trichlorobenzene, 1,2,4-Trichlorobenzene, Ethyl Benzene, Isopropylbenzene, Styrene, Toluene, Tetrachloroethene, Trichloroethene, o-Xylene and m and/or p-Xylene were UJ-coded in sample -2. These analytes were not found in the samples at or above the reporting limits; however, the reporting limits are an estimate (UJ-coded) due to low recoveries of the surrogate analytes. The actual reporting limits for these analytes may be higher than the reported values.

**APPENDIX F**  
**BUILDING PERMIT APPLICATION**

# CITY OF JEFFERSON - BUILDING PERMIT APPLICATION

---

Building Permit No. 41-20

The undersigned hereby makes application with the Building Official of the City of Jefferson, Iowa for a permit to **Erect, Reconstruct or Alter** at the address described on this application.

There is to be made a part of this application, on the **Plot Plan Form**, a scale drawing of the outline of the proposed structure in relation to the lot lines and all required dimensions of the lot and proposed structure. Before a building permit is issued, the proposed structure and lot lines must be staked and string lined so all yard requirements can be verified.

Issuance of this Building Permit will be made solely upon the representation of the undersigned applicant. The City of Jefferson assumes no responsibility for the accuracy of the information furnished, including, but not limited to, the location of property lines. The City of Jefferson retains the right to revoke a permit invalidly issued. Further, the City of Jefferson assumes no responsibility for the consequences of a permit invalidly issued, including any rights, which may accrue to adjoining property owners and other affected citizens. Applicant further states that they are familiar with the Zoning Ordinance of the City of Jefferson and that said structure will be used for the purpose herein stated and no other. **The applicant hereby acknowledges that he/she has been informed that the State of Iowa has adopted Building Codes and that compliance with all applicable Codes is a State Law and the applicant's sole responsibility. Applicants must comply with Federal, State and local erosion control regulations.**

All commercial buildings must meet ADA Requirements. **Iowa State Plumbing Code prohibits the drainage of storm water into sewers intended for sanitary sewage use only.**

**Permit Required:** A permit shall be obtained before beginning construction, alteration or repairs, other than ordinary repairs. Ordinary repairs are nonstructural repairs including painting, wall finishes, roof coverings, exterior siding replacement, repairs to plumbing, mechanical and electrical systems. A permit is required for the construction of: a new building, addition, alteration, repair or replacement, garage, accessory building, deck, porch, fences and signs. A permit is also required for: driveways, sidewalks, water and sewer service connections, excavation on any city property or city right of way, moving or relocating an existing building or structure within the corporate limits of the City of Jefferson.

**Permit Application:** It is very important to complete the application in detail, so that it can be processed in a timely manner. Verifying zoning requirements and permit processing may take 2 to 5 business days. You will be contacted when your permit is ready.

Iowa law requires that all owners and occupants of homes built before 1978 are informed about **LEAD-BASED PAINT** before you **renovate, remodel, or repaint**. Contact the Iowa Department of Public Health at 800-972-2026 for additional information and forms.

**Diggers Hotline 1-800-292-8989**

Call at least 48 hours in advance, when digging.

If you have any questions, please contact the Jefferson Building Inspection Office.

## BUILDING PERMIT APPLICATION

I hereby certify that the data submitted on or with this application is true and correct, that I am the owner at this address or, that for the purpose of obtaining this approval, am acting as agent in owners' behalf. **Contractors who are registered with the Secretary of State, State of Iowa, and who carry Contractors Commercial Liability Insurance of not less than \$500,000.00 will perform all work done on this project.** When approved and numbered, this application becomes a permit to build. Granting of this permit does not presume to give authority to violate or cancel the provisions of any state or local law regulating construction or the performance of construction. This permit expires if the work is not commenced within six months from the date of issue, or if the work is not completed within one year from the date of issuance. In the discharge of duties, the Building Inspector shall have the authority to enter the building, structure or premises for the purpose of inspecting the work permitted and posting notices.

I also certify that the Plot Plan attached hereto is a true representation of this lot and accurately shows all dimensions, easements, proposed and existing structures on said lot. Any deviation from this approved Plot Plan may void the related building permit, zoning approvals or waivers. I further state that all property lines have been located by myself or by a legal surveyor for the lot located at the legal description noted on this application.
